

LIVE TOUCH HARD

ULTRA-FINE DIAMOND PASTES FOR POLISHING

Reproducing the form and translucency of the natural tooth is the objective of every high-end aesthetic restoration.

Yet the true detail that makes the difference lies in the surface: improper polishing renders the restoration unnatural both visually and to the touch.

To achieve realistic reflections and authentic brilliance, polishing must be precise, controlled, and effective.

LIVE TOUCH was conceived precisely for this purpose: a system of diamond pastes with an exceptionally high polishing capacity and a high diamond concentration, delivering rapid results of remarkable naturalness.

LIVE TOUCH pastes follow a logic of progressive steps, allowing precise work on different areas and the customisation of the polishing degree.

The consistency is ideal, easy to dispense and effortless to manage.

The LIVE TOUCH KIT delivers outstanding results not only on ceramics, but also on composites, resins, and metals, ensuring an impeccable finish in every situation.
